Subject: Questions - August Sampling - Silverton

Hi Dan,

I hope all is going well. Here are some additional questions regarding the August Sampling near Silverton:

1. Soil/Waste Samples – How many samples will be taken from each site listed in Table A.7-6? (Total jars/composites). We need to understand this so we can coordinate sample containers.

2. Flood Plain Samples:

a. Waste/Soils – Are the locations listed in Table A.7-6 for Eureka, Forest Queen, and Kittimack (no coordinates) the same as the locations listed in Table A.7-8 (no coordinates)?

a.1 When available, Can Sunnyside obtain the GIS database with waste/soil location coordinate details?

b. Fluvial Deposit Areas and SW/PW

i. Coordinates are given for Fluvial Deposit Areas (A.7-8); however, it is not specifically indicated if these locations refer to surface water and/or pore water sites. Can I assume they are?

ii. If not, what will be sampled here and where will the SW and PW samples be taken (coordinates) and how many?

c. The sediment locations listed in Table A.7-6 do not match the locations in A.7-8 (for SW and PW, assuming they're in Table A.7-8). Will additional sediment samples be taken where the SW and PW samples are being taken?

3. Which ADITS will be sampled? Do you have the coordinates? Will they be sampled like surface water with a dipper? If not then what is the protocol?

Hopefully that's it for questions. Let me know if any of this doesn't make sense and we can chat about it.

Thanks!

Terry Turner
